# Per-capita emissions: personal estimate and country context

Consumption accounting in both panels; greenhouse-gas and system boundaries differ.

### PERSONAL ESTIMATE — $CO_2$-EQUIVALENT

| | |
|---|---|
| Illustrative Redfern resident | **9.54 t $CO_2$-e/person/year** |

2025–26 spending × 2018 IO intensities; provisional private-consumption footprint.

### NATIONAL REFERENCES — $CO_2$ ONLY

| Country | 2018: t $CO_2$/person | Trend: 1990–2023 |
|---|---|---|
| United States | **16.97** | |
| **Australia** | **15.38** | |
| Japan | **10.04** | |
| United Kingdom | **8.17** | |
| China | **6.66** | |
| India | **1.63** | |

Country figures: fossil-fuel and industrial $CO_2$, adjusted for trade; excludes land-use change.

Source: Our World in Data / Global Carbon Budget (2025); accessed 8 November 2026.

**Contextual comparison, not a like-for-like ranking. Do not infer a percentage below Australia:**

the personal result includes non-$CO_2$ gases and differs in year, valuation and final-demand coverage.
